

# Theory – Data Dependent Acquisition (DDA) and Data Independent Acquisition (DIA)

Implementation Workshop: TOF/QTOF for Forensic Toxicology and Chemistry  
Planning/Implementation – Wednesday October 18, 2023

**Alex J. Krotulski, Ph.D.** – Center for Forensic Science Research and Education (CFSRE)

# INTRODUCTION

- **Center for Forensic Science Research & Education**

- Associate Director
  - Toxicology & Chemistry
- Program Manager
  - NPS Discovery

- **Thomas Jefferson University**

- Assistant Program Director
  - MS in Forensic Toxicology
- Faculty / Lecturer

# THE CFSRE & OUR LAB

- The Center for Forensic Science Research and Education (CFSRE)
  - 501(c)(3) non-profit research and educational facility
  - Surveillance & Casework

Waters Xevo® G2-S LC-QTOF-MS

Sciex X500R LC-TOF-MS

Sciex TripleTOF® 5600+ LC-TOF-MS

Agilent 6495 LC-QQQ-MS

Agilent 6430 LC-QQQ-MS

Waters TQS LC-QQQ-MS

Waters TQD LC-QQQ-MS

Agilent 5975 GC-MS

Agilent 5975 GC-MS

# INTRODUCTION

# TARGETED VS. NON-TARGETED

- **Definitions:**

- Targeted: Directed at a particular group or activity [or analyte]
- Non-Targeted: Not directed at a particular group or activity [or analyte]

- **What are the benefits?**

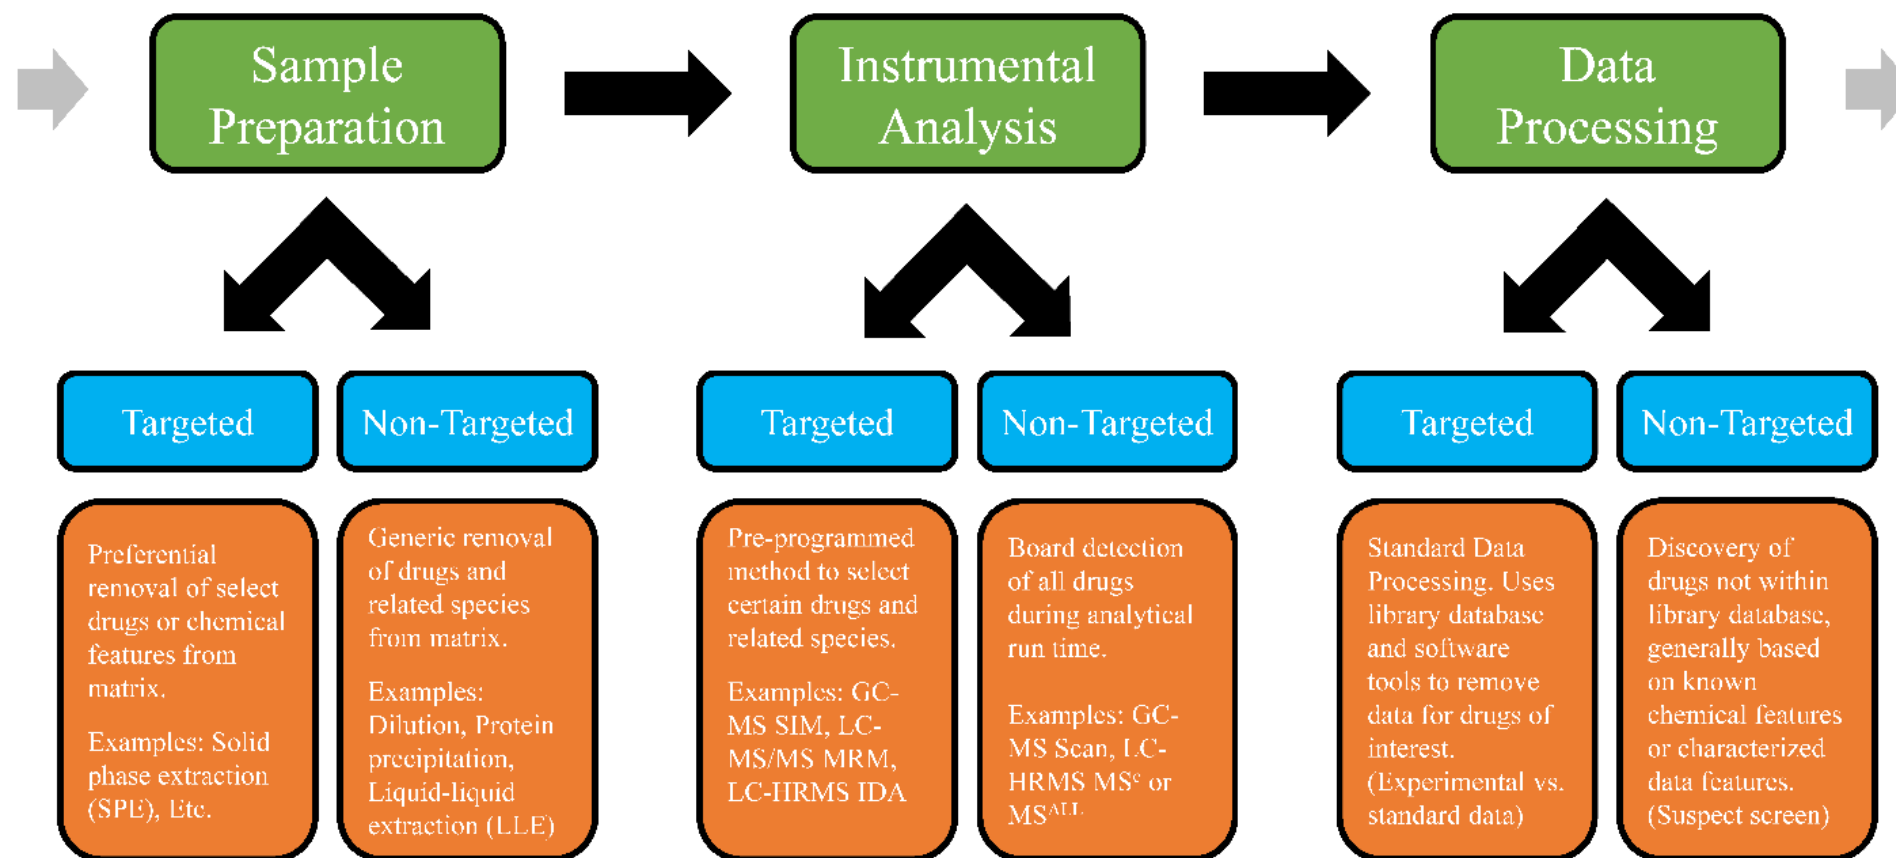

- Targeted: Specific, Direct, Intended, Focused, Aimed, Straightforward
- Non-Targeted: Non-specific, Comprehensive, Indirect, Broad, Complicated

- **How do these two fit into forensic practice?**

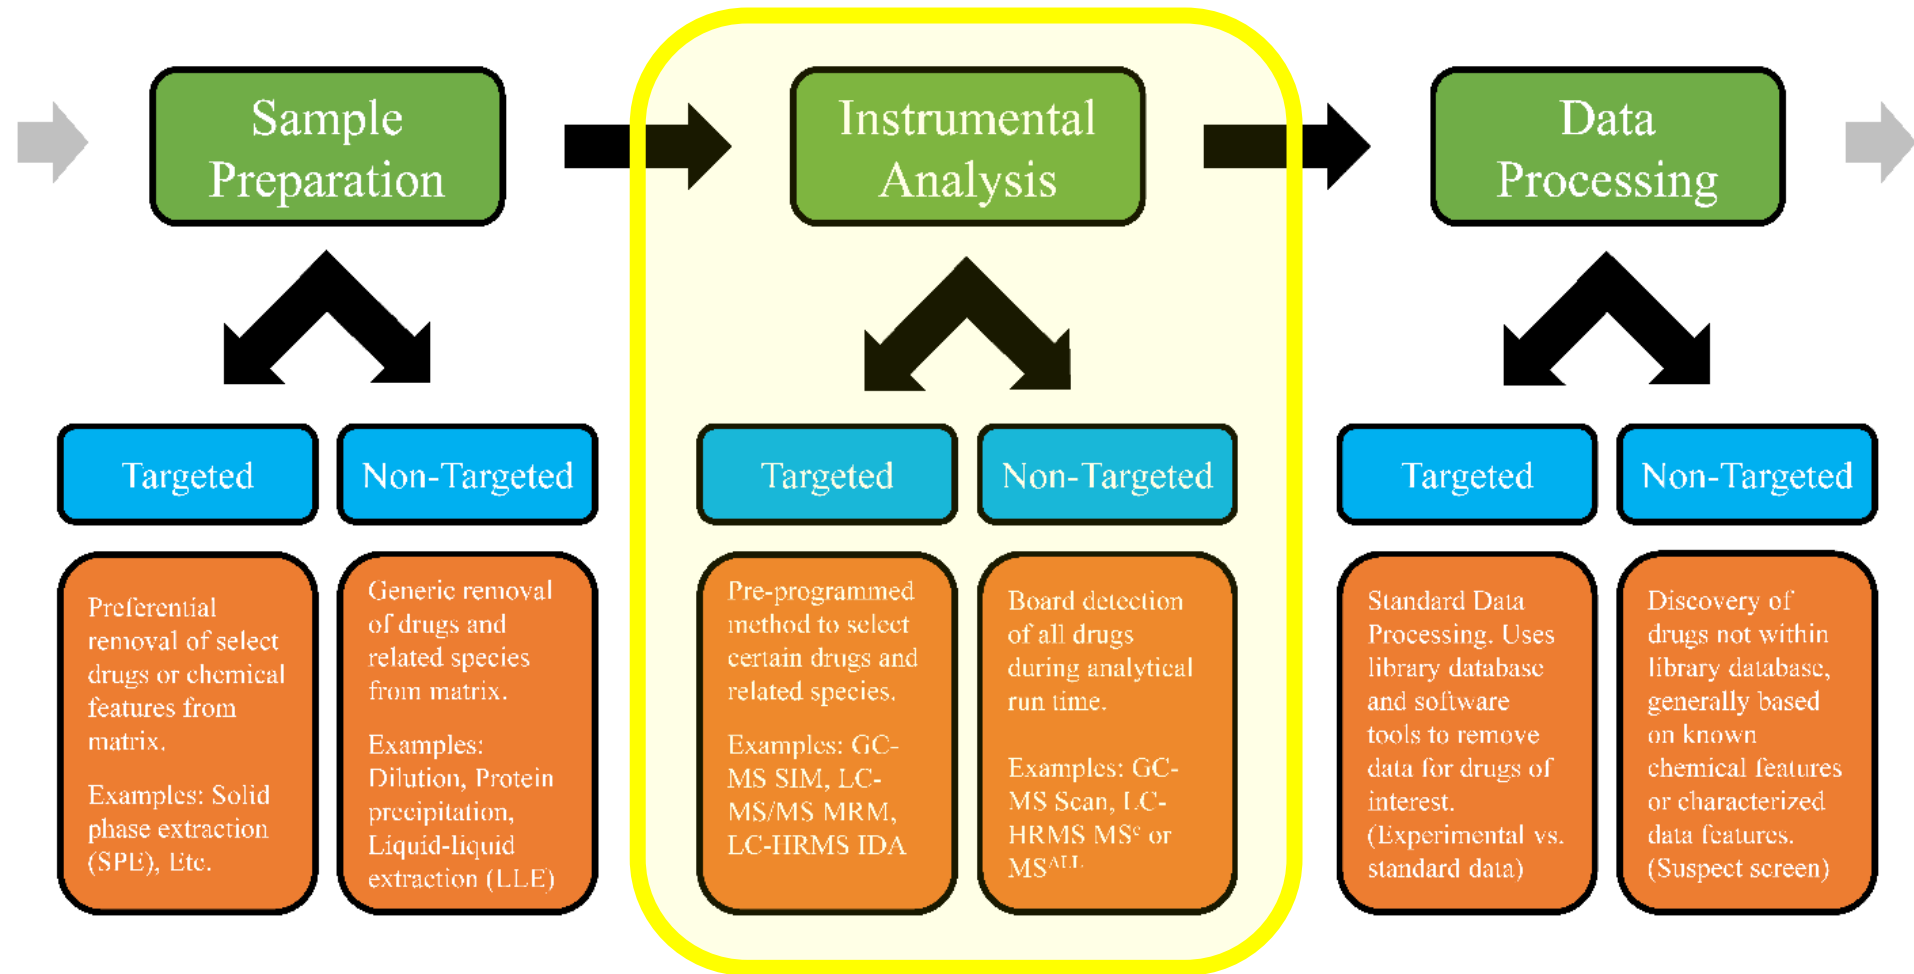

- Does non-targeted sound like the opposite of what we know in the forensic world???
- Targeted and non-targeted can be used complementary to each other

# TARGETED VS. NON-TARGETED

# TARGETED VS. NON-TARGETED

TOF/QTOF

# TARGETED VS. NON-TARGETED

- **Targeted vs. Non-targeted in TOF-QTOF terms:**

- TOF methods are generally all non-targeted (akin to GC-MS full scan)
- QTOF methods can be targeted and/or non-targeted

- **Primary components of a TOF/QTOF method:**

- Source parameters
- TOF-MS scan – produces mass spectrum #1
- Quadrupole – results in mass spectrum #2 (QTOF only)
- Collision cell set points (QTOF only)
- [TOF Analyzer]
- [Detector]

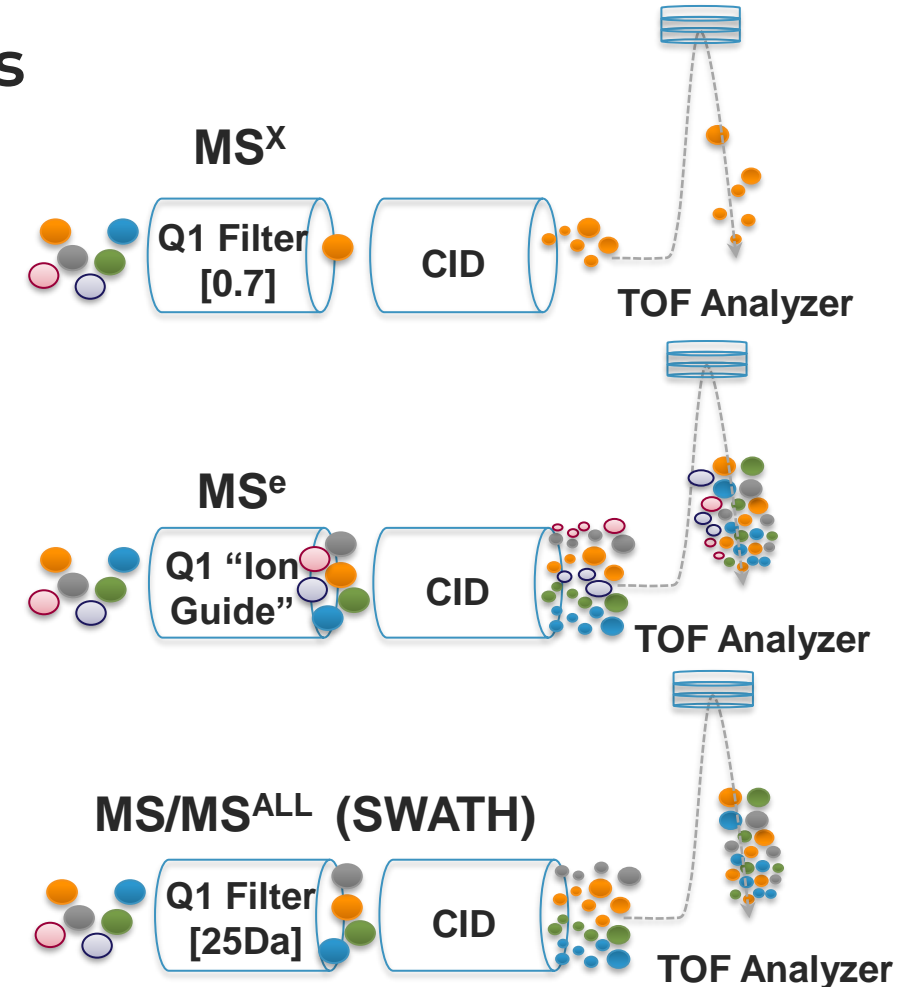

# TARGETED VS. NON-TARGETED

## ■ Ion Filtering and Fragmentation Techniques

- Pass one mass –  $MS^X$
- Pass all masses –  $MS^{ALL}$  (or  $MS^e$ )
- Pass range/pocket of masses –  $MS/MS^{ALL}$

- Acquisition mode dictates what data is produced and possible outcomes

# ACQUISITION MODES

# DATA DEPENDENT VS. DATA INDEPENDENT

## TARGETED ACQUISITION MODES

- **Data Dependent Acquisition (DDA)**
  - *Information Dependent Acquisition (IDA)*
  - Specific, non-inclusive, cycling acquisition
  
- MS/MS acquisition dependent on “sample”
- “If  $x \rightarrow$  then  $y$ ” ( $x$  = mass, intensity, etc.)
- *Multiple reaction monitoring (MRM<sup>HR</sup>, MS<sup>X</sup>)*

## NON-TARGETED ACQUISITION MODES

- **Data Independent Acquisition (DIA)**
  - Generic, comprehensive, cycling acquisition
  
- MS<sup>e</sup> (or MS<sup>ALL</sup>)
  - E.g., Waters, Agilent All Ions MS/MS
- MS/MS<sup>ALL</sup>
  - E.g., Sciex SWATH Acquisition

# ACQUISITION MODES

- **Quadrupole**
  - “Ion Guide” or Mass Filter

- **Collision Cell**
  - Fragmentation

- **Time-of-Flight**
  - Accurate Mass
  - TOF MS & MS/MS

# ACQUISITION MODES

## Targeted / Data Dependent

Traditional "Triple Quad"

Traditional MS/MS (IDA)

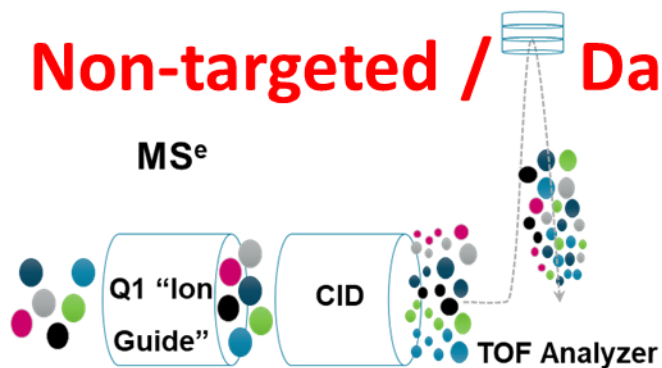

## Non-targeted / Data Independent

"Single Quad" / Scan

MS<sup>e</sup>

MS/MS<sup>ALL</sup> with SWATH®

# 3D VIEW OF DATA ACQUISITION

# 2D VIEW OF DATA ACQUISITION

- There is constant acquisition of data on a cycling basis
  - Each cycle consists of a TOF-MS acquisition (generally spanning totally range of masses of interest)
  - Each cycle consists of sequential QTOF-MS (or MS/MS) acquisition(s) (variable)

- Examples for SWATH Acquisition:

# ACQUISITION MODES

(a) Data-dependent acquisition (DDA)

(c) Data-independent acquisition (DIA)

# STRENGTHS OF DDA VS. DIA

## ▪ DDA (Targeted)

- High specificity
- Certainty in fragment-to-precursor correlation
- Isotopes discernable through accurate mass
- May be ideal for structural elucidation

## ▪ Both

- Perfectly valid approaches to data acquisition
- Employed successfully in many toxicology labs (and chemistry)
- Library search capabilities

## ▪ DIA (Non-Targeted)

- Lower specificity (but remember chromatography)
- Isotope patterns more obvious
- Generally, more manageable for comprehensive screening
- Extracted ion chromatograms

2C-B	260.02807	5.36	212.9543	260.02789
2C-B	260.02807	5.36	164.0825	260.02789
2C-B	260.02807	5.36	134.073	260.02789

# CONCLUSIONS

# CONCLUSIONS

- It's important to understand:
  - **Targeted vs. non-targeted** in terms of analytical workflows
  - Data dependent acquisition (DDA) vs. data independent acquisition (DIA)
- **Instruments, hardware, and software** vary by vendor
  - MS<sup>e</sup> vs. MS<sup>ALL</sup> vs. MS/MS<sup>ALL</sup>
- There is no **“right way”** to TOF/QTOF acquisition
  - Highly dependent on purpose of method
- **More and more forensic labs using HRMS!**

# ACKNOWLEDGEMENTS

## ■ CFSRE Team

- Barry Logan
- Sara Walton
- Josh DeBord
- Mandi Mohr
- Melissa Fogarty
- Alyssa Reyes
- Brianna Stang
- Alexis Quinter
- Max Denn
- Many others!

## ■ MS Collaborators

- Sciex
- Waters
- Agilent
